## PrEP willingness

**PrEP stands for pre-exposure prophylaxis. It involves a healthy person taking a pill used to treat HIV in order to prevent being infected with HIV. The pills have to be taken once a day, every day. Some people who take these pills experience side effects. These may include nausea and weight loss, which usually go away after the first month. In rare cases, taking the pill for long periods may damage the kidneys. The medication is prescribed by a doctor. Taking this medication provides only partial protection against HIV infection. So, a person on the**

## DCE intro question

**Pre-exposure prophylaxis, or PrEP, has been shown to reduce the risk of acquisition of HIV when taken as a daily pill. Researchers are working on an injectable form of PrEP that would be prescribed by a doctor and given as a shot. The shot would have to be given every few months to reduce the risk of getting HIV.**

**Before today, have you ever heard of an injectable form of PrEP that you get every couple months, as a way to reduce the risk of getting HIV?**

- No
- Yes
- I prefer not to answer
- Don't know

**How likely would you be to use this injectable form of PrEP to reduce the risk of getting HIV?**

- Very likely
- Somewhat likely
- Neither likely nor unlikely
- Somewhat unlikely
- Very unlikely
- I prefer not to answer
- Don't know

**Page entry logic:** DCE random question module (1 to 2) is exactly equal to "1")

## **DCE Module #1**

**Now we're going to ask you some questions to better understand the characteristics of injectable PrEP that would be most desirable to potential patients.**

**For each question below, you will be presented with two sets of hypothetical choices related to injectable PrEP. Considering all the hypothetical characteristics in each pair, choose *either* Choice A *or* Choice B, you also have the option of Choice C, Neither. Neither means "I would not choose the PrEP injection."**

**There are 14 questions like this in total.**

**Here are some definitions to help you to better understand the characteristics and choices:**

**Side effects:**

- **25% chance of moderate pain at the injection site: In clinic trials of the PrEP injection, some people had mild-to-moderate pain or tenderness at the site of the shot, and it lasted 2-7 days. This is about the same as getting a flu shot or a vaccine.**

- **15% chance of a headache: In clinic trials of the PrEP injection, a small proportion of people reported headache in the couple days after they got the shot.**
- **5% chance of rash. In clinic trials of the PrEP injection, a very small proportion of people reported a mild rash, which cleared up on its own.**

**Out-of-pocket cost:** Fees (e.g. deductibles, coinsurance, or copayments) that you pay directly to a business in order to receive the injection. The cost listed is per shot (every couple months). For example, \$100 means you pay \$100 every two months to get one shot.

**Level of protection: This is the** how well the PrEP injection works to prevent HIV. That is, while getting the PrEP injection, how many people out of every 1000 people are protected from getting HIV.

**Total time spent obtaining PrEP:** In order to get the injection, patients will need to travel to a health provider or clinic, get laboratory tests done, get the injection, and travel home again. The times listed below represent the TOTAL time spent, including travel to and from the provider's office, time waiting at the clinic, and time getting the shot itself.

### **CHOICE A**

- **15% chance of headache**
- **Costs \$30 out of pocket**
- **Protects 999 out of 1,000 people**
- **Takes 1 hour total for travel, tests, and injection**

### **CHOICE B**

## DCE Module #2

Now we're going to ask you some questions to better understand the characteristics of injectable PrEP that would be most desirable to potential patients.

For each question below, you will be presented with two sets of hypothetical choices related to injectable PrEP. Considering all the hypothetical characteristics in each pair, choose *either* Choice A *or* Choice B, you also have the option of Choice C, Neither. Neither means "I would not choose the PrEP injection."

There are 14 questions like this in total.

Here are some definitions to help you to better understand the characteristics and choices:

### Side effects:

- **25% chance of moderate pain at the injection site:** In clinic trials of the PrEP injection, some people had mild-to-moderate pain or tenderness at the site of the shot, and it lasted 2-7 days. This is about the same as getting a flu shot or a vaccine.
- **15% chance of a headache:** In clinic trials of the PrEP injection, a small proportion of people reported headache in the couple days after they got the shot.
- **5% chance of rash.** In clinic trials of the PrEP injection, a very small proportion of people reported a mild rash, which cleared up on its own.

**Out-of-pocket cost:** Fees (e.g. deductibles, coinsurance, or copayments) that you pay directly to a business in order to receive the injection. The cost listed is per shot (every couple months). For example, \$100 means you pay \$100 every two months to get one shot.

**Level of protection:** This is the how well the PrEP injection works to prevent HIV. That is, while getting the PrEP injection, how many people out of every 1000 people are protected from getting HIV over 1 year.

**Total time spent obtaining PrEP:** In order to get the injection, patients will need to travel to a health provider or clinic, get laboratory tests done, get the injection, and travel home again. The times listed below represent the TOTAL time spent, including travel to and from the provider's office, time waiting at the clinic, and time getting the shot itself.

Now we're going to ask you some questions to better understand the characteristics of injectable PrEP that would be most desirable to potential patients. Consider that you are talking to your doctor about the PrEP injection. Please choose the *one best thing* and the *one worst thing* about a PrEP injection for these 11 questions.

Consider that you are talking to your doctor about getting the PrEP injection with the following attributes:

- 5% chance of rash
- \$30 out-of-pocket cost
- Protects 999 out of 1,000 people over one year
- Takes 1 hour total for travel, tests, and injection

**Out of the options below, please choose the *one best thing* about the PrEP injection and the *one worst thing* about the PrEP injection.**

**Best**

- 5% chance of rash
- \$30
