Supplemental Table 1. All concentrations presented as geometric mean (GM) with corresponding standard error (SE). Abbreviations for persistent organic pollutants (POPs) are as follows: 2,3,7,8-tetrachlorodienzo-p-dioxin (TCDD), polychlorinated biphenyl 74 (PCB-74), polychlorinated biphenyl 105 (PCB-105), polychlorinated biphenyl 153 (PCB-153), polybrominated diphenyl ether 47 (PBDE-47), perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), p,p'-dichlorodiphenyldichloroethylene (DDE).

Supplemental Table 2. Adjusted associations between lipophilic micronutrient levels and persistent organic pollutant concentrations in males: modified by age and body mass index. National Health and Nutrition Examination Survey, 2003-2004, aged 12 years and older.

Micronutrient biomarker	TCDD (N=381) β, p-value	PCB-74 (N=396) β, p-value	PCB-105 (N=393) β, p-value	PCB-153 (N=396) β, p-value	PBDE-47 (N=434) β, p-value	PFOA (N=468) β, p-value	PFOS (N=468) β, p-value	DDE (N=420) β, p-value

Supplemental Table 2. In 381 – 468 male participants, associations (regression estimate coefficient, p-value) for each pair of natural log-transformed serum micronutrient biomarker and persistent organic pollutant (POP) by effect measure modifier using a multiple linear regression model. An asterisk (*) denotes value is statistically significant at the 5% significance level. Abbreviations for persistent organic pollutants (POPs) are as follows: 2,3,7,8-tetrachlorodienzo-p-dioxin (TCDD), polychlorinated biphenyl 74 (PCB-74), polychlorinated biphenyl 105 (PCB-105), polychlorinated biphenyl 153 (PCB-153), polybrominated diphenyl ether 47 (PBDE-47), perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), p,p'-dichlorodiphenyldichloroethylene (DDE). Body mass index (BMI) was categorized for participants aged 12 – 19 years old with BMI-for-age percentiles by sex using the 2000 Centers for Disease Control and Prevention (CDC) growth charts and for participants 20 years old and older by weight in kilograms divided by weight (kilograms) divided by height (meters²). Participants considered underweight were excluded due to small sample size. All models adjusted for race and ethnicity, serum cotinine, and poverty-to-income ratio (PIR). PFOA and PFOS modeled without adjusting for total serum lipids. Only models with vitamin D biomarker as a predictor adjusted for 6-month exam period.

Supplemental Table 3. Adjusted associations between lipophilic micronutrient levels and persistent organic pollutant concentrations in females: modified by age and body mass index. National Health and Nutrition Examination Survey, 2003-2004, aged 12 years and older.

Micronutrient biomarker	TCDD (N=381) β, p-value	PCB-74 (N=396) β, p-value	PCB-105 (N=393) β, p-value	PCB-153 (N=396) β, p-value	PBDE-47 (N=434) β, p-value	PFOA (N=468) β, p-value	PFOS (N=468) β, p-value	DDE (N=420) β, p-value

Supplemental Table 3. In 399 – 442 female participants, associations (regression estimate coefficient, p-value) for each pair of natural log-transformed serum micronutrient biomarker and persistent organic pollutant (POP) by effect measure modifier using a multiple linear regression model. An asterisk (*) denotes value is statistically significant at the 5% significance level. Abbreviations for persistent organic pollutants (POPs) are as follows: 2,3,7,8-tetrachlorodienzo-p-dioxin (TCDD), polychlorinated biphenyl 74 (PCB-74), polychlorinated biphenyl 105 (PCB-105), polychlorinated biphenyl 153 (PCB-153), polybrominated diphenyl ether 47 (PBDE-47), perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), p,p'-dichlorodiphenyldichloroethylene (DDE). Body mass index (BMI) was categorized for participants aged 12 – 19 years old with BMI-for-age percentiles by sex using the 2000 Centers for Disease Control and Prevention (CDC) growth charts and for participants 20 years old and older by weight in kilograms divided by weight (kilograms) divided by height (meters²). Participants considered underweight were excluded due to small sample size. All models adjusted for race and ethnicity, serum cotinine, and poverty-to-income ratio (PIR). PFOA and PFOS modeled without adjusting for total serum lipids. Only models with vitamin D biomarker as a predictor adjusted for 6-month exam period.
